

# 예각삼각형의 넓이

$\sin A$

$$\sin A = \frac{\overline{CH}}{b}$$

$$\sin A = \frac{\overline{CH}}{b}$$

$$\therefore \overline{CH}$$

$$\sin A = \frac{\overline{CH}}{b}$$

$$\therefore \overline{CH} = b \sin A$$

$$\sin A = \frac{\overline{CH}}{b}$$

$$\therefore \overline{CH} = b \sin A$$

$$\sin A = \frac{\overline{CH}}{b}$$

$$\therefore \overline{CH} = b \sin A$$

$S$

$$\sin A = \frac{\overline{CH}}{b}$$

$$\therefore \overline{CH} = b \sin A$$

$$S = \frac{1}{2} \times c \times b \sin A$$

$$\sin A = \frac{\overline{CH}}{b}$$

$$\therefore \overline{CH} = b \sin A$$

$$S = \frac{1}{2} \times c \times b \sin A = \frac{1}{2} c b \sin A$$

$$\sin A = \frac{\overline{CH}}{b}$$

$$\therefore \overline{CH} = b \sin A$$

$$S = \frac{1}{2} \times c \times b \sin A = \frac{1}{2} c b \sin A$$

$$\therefore S = \frac{1}{2} b c \sin A$$
